

The Ruminant Nutrition System

An Applied Model for Predicting Nutrient Requirements and Feed Utilization in Ruminants

Luis Orlando Tedeschi

Professor

Department of Animal Science

Texas A&M University

Danny Gene Fox

Professor Emeritus

Department of Animal Science

Cornell University

Table of Contents

Preface	iii
About the Authors	vii
Acknowledgements	ix
Table of Contents	xv
List of Figures	xxi
List of Tables	xxvi
Part I. Introduction	29
1 The Utility of Nutrition Models	1
1.1 The role of modeling and simulation	1
1.2 Identifying the appropriate level of model intricacy	2
1.3 Developing mathematical nutrition models	5
2 A Historical Perspective	7
2.1 The history behind the development of CNCPS-based applied nutritional and growth models	7
2.1.1 Models to accurately predict nutrient requirements of all classes of beef and dairy cattle as well as feed digestion and metabolism to meet their requirements to balance rations in each unique production situation	8
2.1.2 Models to predict growth rate or milk production, cost of gain or milk production, body reserves changes, and total feed requirements over post-weaning growth or reproductive cycle	11
2.1.3 Models to allocate feed to individuals and predict their feed efficiency when fed in groups	12
2.1.4 The application of nutrition models for livestock production systems in the tropics	14
2.2 The next generation of applied ruminant nutrition models	16
3 A Contemporary Perspective	19
3.1 Environmental sustainability: A major contemporary concern	20
3.2 Feeding the future, caring for our own existence	29
3.3 Animal products as part of a healthy diet.....	31
3.3.1 Animal products' association with heart disease and cancer.....	33
3.3.2 Role of body weight and exercise in preventing chronic disease.....	35
3.4 Looking to the future: Developing innovative and integrated nutrition models	36
Part II. Modeling the Dietary Supply of Energy and Other Nutrients	37
4 The Foundation of Dietary Supply	39
5 Measuring the Useful Energy and Protein in Feeds	43
5.1 Tabular TDN values	46
5.2 Predicting TDN with empirical equations	50
5.3 Predicting TDN with theoretical equations.....	52
5.3.1 Indigestible compounds	53
5.3.2 Summative equations.....	54
5.4 Equations used by the RNS to predict energy and protein supply	61
6 Level of Solution 0 (L0)	63

7	Level of Solution 1 (L1)	65
7.1	Evaluating theoretical equations.....	65
7.2	Predicting TDN at maintenance level of intake (TDN _{1x})	68
7.3	Discounting the TDN _{1x} for levels of intake above maintenance (TDN _{nx})	69
7.4	Energy partitioning.....	74
7.4.1	Predicting digestible energy.....	74
7.4.2	Predicting metabolizable and net energy	75
7.5	Protein system.....	78
7.5.1	Predicting ruminally undegraded protein	80
7.5.2	Predicting microbial crude protein	82
7.5.3	Predicting metabolizable protein.....	84
7.6	Other L1-type feeding systems	85
7.6.1	National Research Council (NRC) system	85
7.6.2	Institut National de la Recherche Agronomique (INRA) system	87
7.6.3	Commonwealth Scientific and Industrial Research Organization (CSIRO) system.....	88
7.6.4	Agricultural and Food Research Council (AFRC) system	88
7.6.5	Comparison of feeding systems	89
8	Level of Solution 2 (L2)	93
8.1	Nutritional fractionation of feeds.....	93
8.1.1	Carbohydrates and short-chain volatile fatty acids	94
8.1.1.1	Nonfiber carbohydrates (NFC)	94
8.1.1.2	Fiber carbohydrates (FC)	98
8.1.1.3	Unavailable fiber carbohydrate and lignin	101
8.1.1.4	Physically effective fiber.....	104
8.1.2	Proteins and amino acids	107
8.1.2.1	The inconsistency of nonprotein nitrogenous compounds and matter creation	111
8.1.2.2	A modified protein fractionation	113
8.1.2.3	Amino acids	114
8.1.3	Lipids and long-chain fatty acids	118
8.1.4	Minerals and vitamins.....	120
8.1.4.1	Macrominerals and microminerals	121
8.1.4.2	Fat- and water-soluble vitamins.....	124
8.1.5	Plant defensive chemicals	124
8.1.5.1	Condensed tannins.....	125
8.1.5.1.1	Mechanisms of action	127
8.1.5.1.2	The methane abatement effect	128
8.1.5.1.3	The protein and amino acid sparing effect	129
8.1.5.1.4	The anthelmintic effect.....	130
8.1.5.1.5	Condensed tannin reactivity	131
8.1.5.1.6	Methodological aspects	133
8.1.5.1.7	Ruminal degradation of polyphenolics	133
8.1.5.1.8	Towards the development of a condensed tannin submodel	134
8.1.6	Other fractionation schemes	135
8.2	Ruminal submodel.....	136
8.2.1	Substrate dynamics in the rumen	137

8.2.2	Nutrient degradation.....	142
8.2.2.1	Carbohydrates	143
8.2.2.1.1	Determining the fractional degradation rate of neutral detergent fiber (NDF) from in vitro or in situ NDF digestibility techniques.....	144
8.2.2.2	Proteins.....	148
8.2.2.2.1	Recycled nitrogen and urea-N used for anabolism	149
8.2.2.3	Lipids.....	153
8.2.2.3.1	Lipolysis	153
8.2.2.3.2	Biohydrogenation	154
8.2.2.3.3	Fatty acid de novo synthesis.....	156
8.2.3	Ruminal pH	159
8.2.4	Microbes.....	162
8.2.4.1	Modeling bacteria growth	165
8.2.4.1.1	Adjustment of CHOB3 kd for ruminal pH	170
8.2.4.1.2	Adjustment of NFC-degrading bacteria maximum yield (Y_G) for peNDF	171
8.2.4.1.3	Adjustment of NFC-degrading bacteria yield for ruminally degraded peptide and carbohydrate.....	172
8.2.4.2	Modeling the peptide uptake by NFC-degrading bacteria.....	173
8.2.4.3	Calculating the ruminal ammonia-N and amino-N balances	177
8.2.4.4	Accounting for a ruminal deficiency of nitrogen	179
8.2.4.5	Accounting for a ruminal deficiency of branched-chain amino acids.....	181
8.2.5	Volatile fatty acids and lactic acid	185
8.2.5.1	Fermentation of lactate	189
8.2.5.2	Methane production.....	193
8.2.6	Nutrient escape	196
8.2.6.1	Cattle.....	198
8.2.6.2	Sheep and goats.....	203
8.2.7	Omasum, abomasum, and duodenum submodels.....	205
8.3	Intestinal submodel	206
8.3.1	Small intestine (midgut)	207
8.3.1.1	Carbohydrates	207
8.3.1.2	Proteins and amino acids.....	213
8.3.1.2.1	Amino acids	213
8.3.1.3	Fats and fatty acids	216
8.3.1.3.1	Fatty acids.....	216
8.3.1.4	Ash	217
8.3.2	Large intestine (hindgut)	217
8.4	Fecal submodel	220
8.4.1	Undigested feeds.....	221
8.4.2	Metabolic matter.....	222
8.5	Energy and protein partitioning.....	226
8.5.1	Total digestible nutrients.....	226
8.5.2	Metabolizable protein	227
9	Other Methods of Determining Energy of the Diet	229
9.1	Near-infrared spectroscopy	229

9.1.1	Direct use of NIRS to determine chemical composition	230
9.1.2	Indirect use of NIRS to determine chemical composition through the fecal analysis	231
9.2	<i>In vitro</i> gas production (IVGP) technique	232
9.2.1	Application of the <i>in vitro</i> gas production technique	234
9.2.2	Approximation of the exponential decay kd using the fiber carbohydrate pool kd of the two-pool logistic decay	237
9.2.3	Future developments for the <i>in vitro</i> gas production technique	240
10	Predicting Feed and Water Intake	241
10.1	The grazing ruminant	242
10.2	Adjustment factors	246
10.2.1	Temperature	246
10.2.2	Mud	247
10.2.3	Breed	247
10.2.4	Body fat	248
10.2.5	Feed additives	249
10.3	Cattle	250
10.3.1	Lactating dairy cows	251
10.3.2	Dry dairy cows	254
10.3.3	Replacement dairy heifers	255
10.3.4	Feedlot beef cattle	258
10.3.5	Beef cows	260
10.4	Sheep and goats	261
10.5	Water intake	263
	Part III. Modeling the Animal Requirements for Energy and Other Nutrients	267
11	The Foundation of Animal Requirements	269
12	Maintenance Requirements	273
12.1	Cattle	273
12.1.1	Energy requirements	273
12.1.1.1	Adjustment for previous temperature	277
12.1.1.2	Adjustment for the effect of lactation	278
12.1.1.3	Adjustment for previous plane of nutrition	278
12.1.1.4	Adjustment for physical activity	279
12.1.1.5	Adjustment for the direct effect of cold stress	282
12.1.1.6	Adjustment for the direct effect of heat stress	284
12.1.1.7	Adjustment for urea formation	286
12.1.1.8	Other considerations and adjustments	287
12.1.2	Protein and amino acid requirements	288
12.2	Sheep and Goats	291
12.2.1	Energy requirements	292
12.2.2	Protein requirements	294
12.3	The next generations of maintenance models	295
12.3.1	Previous plane of nutrition	295
12.3.2	Genetic merit and age	296
12.3.3	Thermal stress	297

12.3.4	Physical activity and grazing energy expenditure	301
12.3.5	Partitioning the energy expenditure for eating and ruminating	303
13	Lactation Requirements	307
13.1	Cattle	307
13.1.1	Amino acid requirements and ratios	309
13.1.2	Predicting milk and forage intake for nursing beef calves	312
13.1.3	Energy and protein biological values for nursing beef calves	316
13.2	Sheep and Goats	316
14	Pregnancy Requirements	319
14.1	Cattle	322
14.2	Sheep and Goats	325
15	Growth Requirements	327
15.1	Cattle	328
15.1.1	Energy requirements	329
15.1.1.1	Determining body composition and rate of gain	329
15.1.1.2	Development of body size scaling to account for mature size	335
15.1.1.3	Adjustment for anabolic agents	340
15.1.1.4	Adjustment for previous plane of nutrition	342
15.1.1.5	Adjustment for dietary factors	343
15.1.1.6	Adjustment for unique breed effects	344
15.1.1.7	Adjustment for different management effects on adjusted final shrunk body weight	344
15.1.2	Protein and amino acid requirements	345
15.1.3	Evaluation of the energy and protein requirements	346
15.1.4	Breeding herd replacement heifers	353
15.1.4.1	Adjusting average daily gain due to pregnancy	357
15.1.4.2	Accounting for mammogenesis requirements	357
15.2	Sheep and Goats	358
15.3	The next generations of growth models	359
15.3.1	Determining the efficiency of use of metabolizable energy	362
15.3.2	Composition of the gain	363
15.3.3	Energy systems integration	367
15.3.4	Efficiency of use of amino acids	368
16	Body Reserves	371
16.1	Cattle	374
16.1.1	Meta-regression analysis and cross-validation of the combined dataset	376
16.1.2	Calculations of the body reserves submodel	379
16.1.2.1	Predicting body composition using the actual body condition score	379
16.1.2.2	Predicting empty body weight at different body condition scores	381
16.1.3	The efficiency of use of body reserves energy and protein	388
16.1.4	Accounting for body protein reserves	390
16.2	Sheep and Goats	391
16.3	The next generation of body reserves submodels	395
16.3.1	Effects of nutritional environment and breeds	396

16.3.2	A different approach for the scaling system.....	397
16.3.3	Developing dynamic submodels	397
17	Minerals and Vitamins	403
17.1	Minerals.....	403
17.1.1	Dairy cattle.....	404
17.1.1.1	Calcium.....	405
17.1.1.2	Phosphorus.....	405
17.1.1.3	Magnesium.....	406
17.1.1.4	Chlorine.....	406
17.1.1.5	Potassium.....	407
17.1.1.6	Sodium.....	407
17.1.1.7	Copper.....	408
17.1.1.8	Iodine.....	408
17.1.1.9	Iron.....	409
17.1.1.10	Manganese.....	409
17.1.1.11	Zinc.....	409
17.1.1.12	Sulfur, cobalt, and selenium.....	410
17.1.2	Beef cattle.....	410
17.1.2.1	Calcium.....	411
17.1.2.2	Phosphorus.....	411
17.1.2.3	Other minerals.....	411
17.1.3	Sheep and goats.....	412
17.1.3.1	Calcium.....	413
17.1.3.2	Phosphorus.....	414
17.1.3.3	Other minerals.....	414
17.1.4	The uncertain chromium requirement for animals.....	414
17.1.5	Dietary cation-anion balance.....	416
17.2	Vitamins.....	417
Part IV. Developing the Feed Library		421
18	The Development of Feed Libraries	423
18.1	Development of the CNCPS feed library	423
18.2	Development of the RNS feed library.....	428
18.2.1	Determining composition of feeds in the RNS feed library.....	430
18.2.2	Ruminally undegraded protein at maintenance level of intake (RUP _{1x}).....	435
Appendices.....		439
List of Appendices		441
Acronyms		461
