

THE RUMINANT NUTRITION SYSTEM

VOLUME I — AN APPLIED MODEL FOR PREDICTING NUTRIENT REQUIREMENTS AND FEED UTILIZATION IN RUMINANTS

Third Edition

LUIS ORLINDO TEDESCHI

Professor and Fellow
Department of Animal Science
Texas A&M University

DANNY GENE FOX

Professor Emeritus
Department of Animal Science
Cornell University

Table of Contents

Preface to the Third Edition	iii
Preface to the Second Edition	iv
Preface to the First Edition	vi
About the Authors.....	xi
Acknowledgments.....	xiii
Table of Contents	xvii
List of Figures	xxiii
List of Tables	xxviii
Part I. Introduction	1
1 The Utility of Nutrition Models	3
1.1 The role of modeling and simulation	3
1.2 Identifying the appropriate level of model intricacy	4
1.3 Developing mathematical nutrition models	7
2 A Historical Perspective	9
2.1 The history behind the development of CNCPS-based applied nutritional and growth models.....	9
2.1.1 Models to predict nutrient requirements of all classes of beef and dairy cattle, and feed digestion and metabolism to meet their requirements to balance rations in each unique production situation.....	10
2.1.2 Models to predict growth rate or milk production, cost of gain or milk production, body reserves changes, and total feed requirements over post-weaning growth or reproductive cycle	13
2.1.3 Models to allocate feed to individuals and predict their feed efficiency when fed in groups.....	14
2.1.4 The application of nutrition models for livestock production systems in the tropics.....	16
2.2 The next generation of applied ruminant nutrition models	18
3 A Contemporary Perspective	20
3.1 Environmental sustainability: A major contemporary concern	21
3.2 Feeding the future, caring for our own existence	31
3.3 Animal products as part of a healthy diet.....	34
3.3.1 Animal products' association with heart disease and cancer	35
3.3.2 Role of body weight and exercise in preventing chronic disease	37
3.4 Looking to the future: Developing innovative and integrated nutrition models.....	38
Part II. Modeling the Dietary Supply of Energy and Other Nutrients	41
4 The Foundation of Dietary Supply.....	43
5 Measuring the Useful Energy and Protein in Feeds.....	47
5.1 Tabular TDN values	51
5.2 Predicting TDN with empirical equations	55
5.3 Predicting TDN with theoretical equations.....	56
5.3.1 Indigestible compounds.....	58
5.3.2 Summative equations	60
5.4 Equations used by the RNS to predict energy and protein supply	67
6 The Tabular Level of Solution.....	68
6.1 Approximating TDN values	69

6.2	Metabolizable protein	71
7	The Empirical Level of Solution	72
7.1	Evaluating theoretical equations.....	72
7.2	Predicting TDN at the maintenance level of intake (TDN _{1x})	75
7.3	Discounting the TDN _{1x} for levels of intake above maintenance (TDN _{nx})	77
7.4	Energy partitioning.....	81
7.4.1	Predicting digestible energy	81
7.4.2	Predicting metabolizable and net energy.....	82
7.5	Protein system.....	85
7.5.1	Predicting ruminally undegraded protein.....	88
7.5.2	Predicting microbial crude protein	89
7.5.3	Predicting metabolizable protein	91
7.6	Other L1-type feeding systems.....	92
7.6.1	National Research Council (NRC) system.....	93
7.6.2	Institut National de la Recherche Agronomique (INRA) system.....	94
7.6.3	Commonwealth Scientific and Industrial Research Organization (CSIRO) system	96
7.6.4	Agricultural and Food Research Council (AFRC) system	96
7.6.5	Comparison of feeding systems.....	97
8	The Mechanistic Level of Solution.....	101
8.1	Nutritional fractionation of feeds.....	101
8.1.1	Carbohydrates and short-chain volatile fatty acids.....	102
8.1.1.1	Nonfiber carbohydrates (NFC)	102
8.1.1.2	Fiber carbohydrates (FC)	106
8.1.1.3	Unavailable fiber carbohydrate and lignin	109
8.1.1.4	Physically effective fiber.....	113
8.1.2	Proteins and amino acids.....	115
8.1.2.1	The inconsistency of nonprotein nitrogenous compounds and matter creation	119
8.1.2.2	A modified protein fractionation	121
8.1.2.3	Amino acids	123
8.1.3	Lipids and long-chain fatty acids.....	126
8.1.4	Minerals and vitamins	129
8.1.4.1	Macrominerals and microminerals	129
8.1.4.2	Fat- and water-soluble vitamins.....	132
8.1.5	Plant defensive chemicals.....	133
8.1.5.1	Classification of tannins.....	134
8.1.5.2	Hydrolyzable tannins.....	134
8.1.5.3	Condensed tannins.....	135
8.1.5.3.1	Mechanisms of action	136
8.1.5.3.2	The methane abatement effect.....	136
8.1.5.3.3	The protein and amino acid sparing effect	138
8.1.5.3.4	The anthelmintic effect.....	139
8.1.5.3.5	Condensed tannin reactivity	140
8.1.5.3.6	Methodological aspects.....	141
8.1.5.3.7	Ruminal degradation of polyphenolics	142
8.1.5.3.8	Towards the development of a condensed tannin submodel	143

8.1.6	Other fractionation schemes	143
8.2	Ruminal submodel	145
8.2.1	Substrate dynamics in the rumen	146
8.2.2	Nutrient degradation	151
8.2.2.1	Carbohydrates	152
8.2.2.1.1	Determining the fractional degradation rate of neutral detergent fiber (NDF) from in vitro or in situ NDF digestibility techniques.....	153
8.2.2.2	Proteins.....	157
8.2.2.2.1	Recycled nitrogen and urea-N used for anabolism	158
8.2.2.3	Lipids.....	162
8.2.2.3.1	Lipolysis	163
8.2.2.3.2	Biohydrogenation	164
8.2.2.3.3	Fatty acid de novo synthesis	166
8.2.3	Ruminal pH.....	168
8.2.4	Microbes	172
8.2.4.1	Modeling bacteria growth	175
8.2.4.1.1	Adjustment of CHOB3 kd for ruminal pH	180
8.2.4.1.2	Adjustment of NFC-degrading bacteria maximum yield (Y_G) for peNDF	182
8.2.4.1.3	Adjustment of NFC-degrading bacteria yield for ruminally degraded peptide and carbohydrate.....	183
8.2.4.2	Modeling the peptide uptake by NFC-degrading bacteria.....	184
8.2.4.3	Calculating the ruminal ammonia-N and amino-N balances	188
8.2.4.4	Accounting for a ruminal deficiency of nitrogen	190
8.2.4.5	Accounting for a ruminal deficiency of branched-chain amino acids.....	191
8.2.5	Volatile fatty acids and lactic acid	197
8.2.5.1	Fermentation of lactate	201
8.2.5.2	Methane production.....	205
8.2.6	Nutrient escape.....	208
8.2.6.1	Cattle.....	210
8.2.6.2	Sheep and goats.....	215
8.2.7	Omasum, abomasum, and duodenum submodels	218
8.3	Intestinal submodel	219
8.3.1	Small intestine (midgut).....	219
8.3.1.1	Carbohydrates	220
8.3.1.2	Proteins and amino acids.....	225
8.3.1.2.1	Amino acids	225
8.3.1.3	Fats and fatty acids	228
8.3.1.3.1	Fatty acids.....	228
8.3.1.4	Ash	229
8.3.2	Large intestine (hindgut).....	230
8.4	Fecal submodel	233
8.4.1	Undigested feeds	233
8.4.2	Metabolic matter	234
8.5	Energy and protein partitioning.....	238
8.5.1	Total digestible nutrients	238
8.5.2	Metabolizable protein.....	239

9	Other Methods of Determining Energy of the Diet	241
9.1	Near-infrared spectroscopy.....	241
9.1.1	Direct use of NIRS to determine the chemical composition.....	242
9.1.2	Indirect use of NIRS to determine chemical composition through the fecal analysis	243
9.2	<i>In vitro</i> gas production (IVGP) technique	244
9.2.1	Application of the <i>in vitro</i> gas production technique	246
9.2.2	Approximation of the exponential decay kd using the fiber carbohydrate pool kd of the two-pool logistic decay.....	249
9.2.3	Future developments for the <i>in vitro</i> gas production technique	252
10	Predicting Feed and Water Intake	253
10.1	The grazing ruminant	254
10.2	Adjustment factors.....	258
10.2.1	Temperature.....	258
10.2.2	Mud	259
10.2.3	Breed	260
10.2.4	Body fat.....	261
10.2.5	Feed additives.....	261
10.3	Cattle	262
10.3.1	Lactating dairy cows	263
10.3.2	Dry dairy cows	267
10.3.3	Replacement dairy heifers.....	267
10.3.4	Feedlot beef cattle.....	270
10.3.5	Beef cows.....	273
10.4	Sheep and goats	274
10.5	Water intake.....	275
	Part III. Modeling the Animal Requirements for Energy and Other Nutrients	279
11	The Foundation of Animal Requirements	281
11.1	Dietary fiber.....	285
11.1.1	Establishing a fiber requirement	285
11.1.2	Integrating fiber and energy requirements	289
12	Maintenance Requirements	291
12.1	Cattle	291
12.1.1	Energy requirements	291
12.1.1.1	Adjustment for the previous temperature.....	295
12.1.1.2	Adjustment for the effect of lactation	296
12.1.1.3	Adjustment for the previous plane of nutrition	296
12.1.1.4	Adjustment for physical activity	297
12.1.1.5	Adjustment for the direct effect of cold stress	300
12.1.1.6	Adjustment for the direct effect of heat stress.....	302
12.1.1.7	Adjustment for urea formation	305
12.1.1.8	Other considerations and adjustments	306
12.1.2	Protein and amino acid requirements.....	307
12.2	Sheep and goats	310
12.2.1	Energy requirements	310
12.2.2	Protein requirements	312

12.3	The next generations of maintenance models	313
12.3.1	The previous plane of nutrition.....	313
12.3.2	Genetic merit and age.....	314
12.3.3	Thermal stress.....	315
12.3.4	Physical activity and grazing energy expenditure	319
12.3.5	Partitioning the energy expenditure for eating and ruminating.....	321
13	Lactation Requirements	325
13.1	Cattle.....	325
13.1.1	Amino acid requirements and ratios.....	327
13.1.2	Predicting milk and forage intake for nursing beef calves	330
13.1.3	Energy and protein biological values for nursing beef calves	334
13.2	Sheep and goats.....	334
14	Pregnancy Requirements.....	337
14.1	Cattle.....	340
14.2	Sheep and goats.....	343
15	Growth Requirements	345
15.1	Cattle.....	346
15.1.1	Energy requirements.....	347
15.1.1.1	Determining body composition and rate of gain.....	347
15.1.1.2	Development of body size scaling to account for mature size	353
15.1.1.3	Adjustment for anabolic agents.....	358
15.1.1.4	Adjustment for the previous plane of nutrition	360
15.1.1.5	Adjustment for dietary factors	361
15.1.1.6	Adjustment for unique breed effects	362
15.1.1.7	Adjustment for different management effects on adjusted final shrunk body weight.....	362
15.1.2	Protein and amino acid requirements	363
15.1.3	Evaluation of the energy and protein requirements.....	365
15.1.4	Breeding herd replacement heifers	371
15.1.4.1	Adjusting average daily gain due to pregnancy	376
15.1.4.2	Accounting for mammogenesis requirements	376
15.2	Sheep and goats.....	377
15.3	The next generations of growth models.....	378
15.3.1	Determining the efficiency of use of metabolizable energy	380
15.3.2	The composition of the gain	382
15.3.3	Energy systems integration.....	386
15.3.4	The efficiency of use of amino acids.....	387
16	Body Reserves.....	390
16.1	Cattle.....	393
16.1.1	Meta-regression analysis and cross-validation of the combined dataset.....	395
16.1.2	Calculations of the body reserves submodel	398
16.1.2.1	Predicting body composition using the actual body condition score.....	398
16.1.2.2	Predicting empty body weight at different body condition scores	400
16.1.3	The efficiency of use of body reserves energy and protein	407
16.1.4	Accounting for body protein reserves.....	409
16.2	Sheep and goats.....	410

16.3	The next generation of body reserves submodels	414
16.3.1	Effects of nutritional environment and breeds	415
16.3.2	A different approach for the scaling system.....	416
16.3.3	Developing dynamic submodels	416
17	Minerals and Vitamins.....	421
17.1	Minerals.....	421
17.1.1	Dairy cattle.....	423
17.1.1.1	Calcium.....	423
17.1.1.2	Phosphorus.....	424
17.1.1.3	Magnesium.....	424
17.1.1.4	Chlorine	425
17.1.1.5	Potassium	425
17.1.1.6	Sodium	426
17.1.1.7	Copper.....	426
17.1.1.8	Iodine.....	427
17.1.1.9	Iron	427
17.1.1.10	Manganese.....	427
17.1.1.11	Zinc	428
17.1.1.12	Sulfur, cobalt, and selenium.....	428
17.1.2	Beef cattle.....	428
17.1.2.1	Calcium.....	429
17.1.2.2	Phosphorus.....	429
17.1.2.3	Other minerals	430
17.1.3	Sheep and goats	430
17.1.3.1	Calcium.....	431
17.1.3.2	Phosphorus.....	432
17.1.3.3	Other minerals	432
17.1.4	The uncertain chromium requirement for animals.....	433
17.1.5	Dietary cation-anion balance.....	434
17.2	Vitamins.....	436
Part IV. Developing the Feed Library		439
18	The Development of Feed Libraries.....	441
18.1	Development of the CNCPS feed library	441
18.2	Development of the RNS feed library.....	446
18.2.1	Determining the composition of feeds in the RNS feed library.....	448
18.2.2	Ruminally undegraded protein at the maintenance level of intake (RUP _{1x})	453
18.3	Additional feed library resources	455
